

DL 200 BT Personal Tracking System

Personal Tracking

This small GPS gadget can easily be placed in a car, boat, or just about any moving object and will record its own time, date, location, speed, direction and altitude.

The recorded information can then be downloaded to your computer through Bluetooth and optionally integrated with Google Earth or Mapquest. This feature allows you to "playback" the location points of the DL200 BT and see a visual mapped history of its travels.

\$399 + GST

Bluetooth™ Interface

The DL 200 BT uses Bluetooth technology to download data. This means that the unit can remain in situ when retrieving data. As part of the package we include a Bluetooth USB dongle.

Rechargeable and 12v Power

The DL 200 BT is totally portable and comes with a 1100 mAh rechargeable battery. The battery will last up to 6 hours on a single charge. Included in the pack is a USB charger and 12 V Car charger interface to give you a choice of charging options.

Optional Satellite Navigation

The DL 200 BT is more than just a clever GPS personal tracking system. Because it is Bluetooth compatible it can be used to deliver GP's data via Bluetooth to any compatible PDA or PC, which when installed with the required mapping software gives you a cost effective Satellite Navigation solution.

Flexible Data

- Records time, date, location, direction and altitude
- Works with Google Earth Mapquest, maps. Google. COM, Virtual Earth
- Location points are downloaded into its software and then mapped.
- Battery duration is 6 hours
- Includes rechargeable Battery

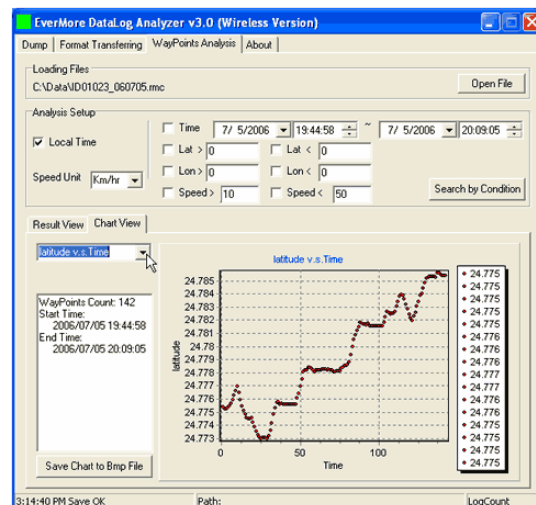

DL200 BT can record up to 25,000 waypoints or locations allowing for weeks of travel. When the DL200 BT is not moving, memory is not used. The record interval is adjustable to anything between 1 and 15 minutes (this is used to save memory and will not extend the battery life). It's so small you can hide it for covert applications. There are no special software applications to buy and the raw data can be exported in RTF, XLS, HTML, or Google Earth KML formats.

How it works

The DL200 BT unit receives signals from twenty four satellites orbiting the earth. With this information, the DL200 BT can precisely calculate its own position anywhere on the planet to within fifteen meters.

Where it works

The DL200 BT will work anywhere on Earth. Using the latest in GPS mapping technologies, your exact location can be shown on graphical maps and 3D satellite images.

Data can be viewed in many free applications

DL 200 BT Personal Tracking System

Mapping

With a range of free mapping options GPS data can be displayed in street map format, satellite image format or as shown in our example combination of both formats.

The GPS data can be easily emailed to co-workers or customer providing both visual and tabular proof of routes taken, speed, time on site and much more.

Detailed Mapping

Images

Images generated from Google Earth can show dramatic detail. Buildings can be clearly seen. Although the actual image is not time stamped to location, information details date, time and length of stationary time.

When stationary, DL200 BT records the location and when motion begins, DL200 calculates the total length of time spent stationary.

Precise Location

Route Overview

When DL200 BT is in motion, data can be recorded every minute. Using Google Earth not only can a clear route overview be seen, users have the ability to "fly" the entire route, producing a birds eye view at a height of around 750 meters above the ground.

No Ongoing Costs

Once purchased, there are no ongoing costs. A one off cost of just \$399 + GST is the only cost involved. All mapping is free and can be accessed from any PC or PDA with internet access.

Ideal Solution For:

- Personal Tracking
- Proof of location
- Vehicle Rentals
- Historical Data
- Driver for GPS Products.

Easy to Order

To order your DL 200 BT simply complete the order form below all call us free on 1800 438 238
